HISTORICAL STATISTICAL BULLETIN – VOLUME 2

INTRODUCTION

This issue of the Historical Statistical Bulletin reviews catch statistics for Atlantic tunas and tuna-like fishes[1] for the years 1960-1969, inclusive.

The International Commission for the Conservation of Atlantic Tunas (ICCAT) has been engaged since its formation in 1969 in collecting and compiling statistical data on tunas and tuna-like fishes of the Atlantic and adjacent seas. A statistical bulletin containing nominal catch data has been published every year, beginning in 1971. Bulletins beginning with Volume 4 (1974) cover the most recent eleven years. In each volume, statistics for previous years are revised, one year is dropped and one year is added. Revisions made for years that have been dropped have not been formally documented and published in a systematic fashion. One of the purposes of the Historical Statistical Bulletin is to publish formally and document all revisions to the statistics which have been dropped from recent Statistical Bulletins.

The Standing Committee on Research and Statistics decided in 1979 to review all historical statistics and revise them thoroughly. Since that time, the Secretariat staff, with assistance from various sources, has reviewed all known sources of statistical information and has been able to make considerable refinements in historical data. Many data not previously reported by ICCAT have become available, and many errors and misinterpretations have been eliminated. Species previously reported combined have been separated, catches have been assigned to appropriate ocean areas, etc. Tables have been reviewed and verified by national statistical offices and by specialist correspondents for various species.

The user of these tables will perceive that data are still missing, and that other data are still less than satisfactory, but we believe that the point of diminishing returns has been reached, and that not much remains to be discovered for Atlantic tuna fishery statistics, 1960-1969.

The present publication should be taken as definitive where differences between the statistics in the present publication and previous publications covering the same years occur.

The work could not have been completed without the advice and assistance of various national statistical offices of both member and non-member countries, specialists in the various species, statistical correspondents, working groups, etc. We are especially grateful for the collaboration of Mr. L. P. D. Gertenbach of the Fisheries Department of FAO.

ORGANIZATION

This Bulletin is divided in four parts:

Part I – Atlantic, Mediterranean, and Atlantic + Mediterranean catches, by species and by country.

Part II – Catches by species, subdivided by fishery (gear), by area and fishery, and by country.

Part III – Detailed catches by country. In this part, due to space limitations, all billfishes except swordfish are grouped under "BIL", while Wahoo, Cero, West African Spanish Mackerel and *Scomberomorus* species unknown are included with "KGM".

Part IV – Catches of billfish, by species, country, area and fishery.

---

[1] "The Scombriformes with the exception of the families Trichiuridae and Gempylidae and the genus *Scomber*" – Article IV of the International Convention for the Conservation of Atlantic Tunas, 1966.

NOTES

Units

Round live weight, to the closest whole metric ton, has been used throughout. Where weight has been reported in other than round live form, the following conversions have been applied:

Yellowfin and bigeye, gilled and gutted – x 1.13

Bluefin, gilled and gutted – x 1.16

Swordfish, dressed – x 1.20

Other billfish, dressed – x 1.20

Symbols used in tables

0 – Nil catch, or no catch reported (see note on **). Appropriate alpha note for the source is given for verified nil catch information.

++ – Magnitude of catch more than zero but less than 0.5 metric ton. No amount added to subtotals or totals.

** – No catch reported, but it is likely that a catch of unspecified amount was made. Nearly always bears alpha note as to source. No amount added to subtotals or totals.

Alphabetic notes on data sources

Alpha notations showing data sources are given in Parts III and IV only. They indicate sources as follows:

No note – Nominal catch reported by national office, either by formal publication or in formal correspondence.

A – Officially reported catches (or landings) which have been further subdivided by fishery (gear) and/or area by the SCRS, a Working Group or the Secretariat.

E – Estimate by SCRS or SCRS Working Group. Includes estimates by national scientists, or by the Secretariat, which have been reviewed and approved by SCRS.

F – From appropriate FAO Yearbook of Fishery Statistics.

G – Estimate by the Secretariat on the basis of best available information.

L – Nominal landing formally reported by national office which may not coincide with amount, time, and/or place of catch.

N – Estimate by national scientist which does not agree with formal statistics, or where formal statistics are not available.

Footnotes

All anomalies from usual reporting are footnoted. For example, where two species are reported together and it has not been possible to separate them, the combined catch is reported under what we believe to be the principal species and footnoted appropriately. Considerable caution should be exercised by the user of these tables, since for mechanical reasons it has not been possible to include all footnotes in all parts. The most complete footnotes will be found in Parts III and IV, and these footnotes must be consulted for appropriate use of the data in Parts I and II.

Geographic areas

Details of geographic area designations used in Parts III and IV are shown on page xii. Larger combinations of these areas are used in Part II:

Yellowfin and skipjack – East or west of 30° West (chart on page xii).

Albacore, bigeye, swordfish, white and blue marlins – North or south of 5° North (all east of 6° West included in south), or Mediterranean (chart on page xii).

Bluefin – East or west, or Mediterranean (chart on page xii).

All others – Atlantic and Mediterranean combined.

Abbreviations and codes

Abbreviations and codes used throughout this Bulletin are shown on pages x - xiii.

BULLETIN STATISTIQUE HISTORIQUE - VOLUME 2

INTRODUCTION

Le présent volume du Bulletin statistique historique récapitule les statistiques de capture de thonidés et espèces voisines de l'Atlantique[1] pour les années 1960 à 1969 incluses.

La Commission internationale pour la conservation des thonidés de l'Atlantique (ICCAT) travaille depuis sa création, en 1969, au recueil et à la compilation de données statistiques sur les thonidés et espèces voisines de l'Atlantique et des mers adjacentes. Un Bulletin statistique faisant état des données de prise nominale a paru tous les ans à partir de 1971. A partir du volume 4 (1974), ces bulletins couvrent les onze dernières années. Chaque nouveau volume révise les chiffres des années précédentes, élimine l'année la plus ancienne et rajoute l'année en cours. Les révisions concernant les années déjà archivées n'ont encore jamais fait l'objet d'une publication spécifique et documentée. L'un des objectifs du présent Bulletin statistique historique est de faire état de toutes les révisions apportées aux données déjà éliminées des derniers Bulletins statistiques.

Le Comité permanent pour la recherche et les statistiques a décidé en 1979 de réviser toutes les statistiques historiques de façon approfondie. Dès lors, le personnel du Secrétariat, auquel divers secteurs ont prêté leur assistance, a examiné toutes les sources connues d'information statistique, ce qui lui a permis d'affiner considérablement les données historiques. De nombreuses données qui n'avaient jamais été fournies par l'ICCAT sont devenues disponibles, et un grand nombre d'erreurs et d'interprétations fausses ont été éliminées. Des espèces auparavant regroupées ont été traitées individuellement, les prises ont été attribuées aux secteurs adéquats de l'océan, etc. Les administrations nationales et les correspondants chargés de ce soin ont révisé les tableaux en ce qui concerne diverses espèces.

Le lecteur observera que des données manquent encore, et que d'autres sont toujours assez peu satisfaisantes, mais il semble que nous ayons atteint le point de rendement non-proportionnel et qu'il nous reste peu de choses à découvrir en ce qui concerne les statistiques de pêche de l'Atlantique des années 1960-1969.

La présente publication doit être considérée comme définitive en cas de conflit entre les statistiques qui y figurent et celles publiées auparavant concernant les mêmes années.

Ce travail a été réalisé grâce à la collaboration et aux conseils des centres de statistiques de divers pays, membres et non membres, de spécialistes des espèces concernées, des correspondants en statistiques, des groupes de travail, etc. Nous tenons à exprimer tout spécialement nos remerciements à M. L.P.D. Gertenbach, du Département des pêches de la FAO.

STRUCTURE

Le présent bulletin se compose de quatre parties:

I^e partie – Prises Atlantique, Méditerranée, et Atlantique + Méditerranée, par espèce et par pays.
II^e partie – Prises par espèce, ventilées par pêcherie (engin), par zone et pêcherie, et par pays.
III^e partie – Prises détaillées par pays. Le manque de place nous a obligé ici à regrouper tous les poissons porte-épée, espadon excepté, à la rubrique "BIL", alors que le thazard bâtard, le thazard franc, le maquereau espagnol d'Afrique occidentale et les espèces non identifiées de *Scomberomorus* sont reportées à la rubrique "KGM".
IV^e partie – Prises de poissons porte-épée par espèce, pays, zone et pêcherie.

---

[1] "Scombriformes, à l'exception des familles Trichiuridae et Gempylidae et du genre *Scomber*" (article IV de la Convention internationale pour la conservation des thonidés de l'Atlantique, 1966).

NOTES

Unités

Le poids vif, arrondi à la tonne entière la plus proche, est utilisé dans l'ensemble du bulletin. Les facteurs de conversion suivants ont été employés dans le cas de poids autres que le poids vif:

Albacore et thon obèse, éviscérés et sans branchies	– x 1,13
Thon rouge, éviscéré et sans branchies	– x 1,16
Espadon, poids manipulé	– x 1,20
Autres poissons porte-épée, poids manipulé	– x 1,20

Symboles utilisés dans les tableaux

0 – Prise nulle, ou non déclarée (voir **). Dans le cas d'une information vérifiée concernant une prise nulle, la source est identifiée par le code alpha approprié.

++– Prise supérieure à 0, mais inférieure à 0,5 TM. Rien n'est ajouté aux totaux partiels et globaux.

** – Aucune capture signalée, mais probabilités d'existence d'une prise d'un volume non déterminé. Source presque toujours identifiée par code alpha. Rien n'est ajouté aux totaux partiels ou globaux.

Code alphabétique des sources de données

Les codes alphabétiques servant à identifier les sources de données, et qui ne figurent qu'aux III^{e} et IV^{e} parties, sont les suivants:

Rien Prise nominale transmise par une administration nationale, sous forme de publication ou de correspondance officielle.

A – Prises (ou débarquements) déclarés de façon officielle, puis ventilés par pêcherie (engin) et/ou zone par SCRS, un groupe de travail ou le Secrétariat.

E – Estimation du SCRS ou d'un de ses groupes de travail. Comprend des estimations de scientifiques des divers pays, ou du Secrétariat, examinées et approuvées par le SCRS.

F – Extrait de l'Annuaire statistique des pêches de la FAO.

G – Estimation du Secrétariat à partir des meilleurs renseignements disponibles.

L – Débarquement nominal transmis de façon officielle par une administration nationale et qui peut ne pas coincider avec le volume, la date et/ou le lieu de la capture.

N – Estimation d'un scientifique ne concordant pas avec les statistiques officielles, ou en l'absence de ces dernières.

Renvois

Toute anomalie fait l'objet d'un renvoi. Par exemple, dans le cas de deux espèces déclarées ensemble et dont la séparation s'avère impossible, la prise combinée est enregistrée à l'espèce dont nous estimons qu'elle prédomine, et un renvoi explicatif est adjoint. Le lecteur doit procéder avec prudence, car des raisons pratiques nous ont empêché de faire paraître les renvois dans toutes les sections. Les notes les plus complètes sont celles des III^{e} et IV^{e} parties, qui doivent être consultées afin de faire le meilleur emploi des données des I^{e} et II^{e} parties.

Secteurs géographiques

Les secteurs géographiques utilisés dans les III^{e} et IV^{e} parties sont décrits en détail à la page xii. D'amples zones combinant certains de ces secteurs sont employées à la II^{e} partie :

Albacore et listao – Est ou ouest des 30°W (carte à la page xii).

Germon, thon obèse, espadon, makaires blanc et bleu – Nord ou sud des 5°N (toujours à l'est des 6°W, y compris au sud), ou Méditerranée (carte à la page xii).

Thon rouge – Est ou ouest, ou Méditerranée (carte à la page xii).

Toutes autres espèces – Atlantique et Méditerranée combinés.

Abréviations et codes

Les abréviations et codes utilisés dans le présent bulletin sont indiqués aux pages x-xiii.

BOLETIN ESTADISTICO HISTORICO - VOLUMEN 2

INTRODUCCION

En la presente edición del Boletín Estadístico Histórico, se examinan las estadísticas de captura de los túnidos y especies afines del Atlántico[1] para los años 1960 a 1969 inclusives.

Desde su creación en 1969, la Comisión Internacional para la Conservación del Atún Atlántico (ICCAT) se ha preocupado de recoger y compilar datos estadísticos sobre túnidos y especies afines en el Atlántico y mares adyacentes. A partir de 1971, ha venido publicando un boletín estadístico anual con datos de captura nominal. Comenzando con el Volumen 4 (1974), los boletines abarcan los últimos once años. En cada uno de ellos, se revisan las estadísticas de años anteriores, eliminando el más antiguo y añadiendo el año en curso. Las revisiones correspondientes a los años eliminados no han sido objeto de una publicación específica o sistemática. Uno de los objetivos del Boletín Estadístico Histórico consiste en ofrecer una publicación oficial y documentada de todas las revisiones efectuadas a las estadísticas eliminadas de los últimos Boletines Estadísticos.

En 1979, el Comité Permanente de Investigaciones y Estadísticas decidió examinar detalladamente todas las estadísticas históricas. Desde esa fecha, el personal de la Secretaría de ICCAT, en consulta con diversas fuentes, ha revisado todos los orígenes conocidos de información estadística, y ha conseguido precisar los datos históricos. Muchos de éstos, que no habían sido facilitados antes por ICCAT, se encuentran disponibles en la actualidad, habiéndose eliminado muchos errores e interpretaciones dudosas. Se ha procedido a separar especies que antes se informaban conjuntamente, y se han asignado las zonas oceánicas correctas a las capturas, etc. Asimismo, los centros nacionales de estadística y los corresponsales especializados para varias especies, revisaron y verificaron las Tablas.

Al consultar dichas Tablas, se observará que aún faltan datos y que otros no llegan a ser satisfactorios, pero, en nuestra opinión, se han logrado notables mejoras, y creemos que, en realidad, no falta mucho por descubrir en cuanto a las estadísticas pesqueras para los túnidos del Atlántico en los años 1960-1969.

Caso de existir alguna discrepancia entre los datos contenidos en las publicaciones anteriores y la presente, deberá elegirse ésta última.

Esta laboriosa tarea no habría podido llevarse a cabo sin la orientación y consejos brindados por los centros nacionales de estadística, tanto de países miembros de ICCAT como de países no miembros, por especialistas de las distintas especies, corresponsales estadísticos, grupos de trabajo, etc. Queremos agradecer, de forma muy especial, la colaboración prestada por Mr. L.P.D. Gertenbach, del Departamento de Pesca de FAO.

ORGANIZACION

El Boletín se divide en cuatro partes:

Parte I	– Capturas en el Atlántico, Mediterráneo y Atlántico + Mediterráneo, por especies y país.
Parte II	– Capturas por especies, subdivididas en pesquerías (arte), por área y pesquería, y por país.
Parte III	– Capturas detalladas por país. En esta Parte, y debido a falta de espacio, se presentan agrupados todos los marlines, excepto el pez espada, bajo la denominación "BIL", en tanto que el Peto y el Carita chinigua y Carita del oeste africano, así como las especies desconocidas de *Scomberomorus* se incluyen bajo la denominación "KGM".
Parte IV	– Capturas de marlines, por especies, país, área y pesquería.

---

[1] " Los scombriformes, con la excepción de las familias Trichiuridae y Gempylidae y el género *Scomber*" (Artículo IV del Convenio Internacional para la Conservación del Atún del Atlántico, 1966).

OBSERVACIONES

Unidades

Se utiliza como unidad el peso vivo redondeado a la tonelada métrica más próxima. En el caso de haberse empleado otra unidad, se han utilizado los siguientes factores de conversión:

Rabil y patudo, sin agallas y eviscerado – x 1.13
Atún rojo, sin agallas y eviscerado – x 1.16
Pez espada, peso manipulado – x 1.20
Otros marlines, peso manipulado – 1.20

Símbolos utilizados en las Tablas

0 – Captura nula, o no declarada (véase nota **). En caso de una información de captura nula verificada, la fuente de información se identifica mediante el correspondiente código alfabético.

++ – Captura superior a cero pero inferior a 0.5 TM. No se añade ninguna cantidad a los subtotales o totales.

** – No se informa captura alguna, pero es probable la existencia de una captura de volumen indeterminado. Casi siempre se identifica mediante el código alfabético. No se añade nada a los subtotales o totales.

Códigos alfabéticos y origen de datos

Los códigos alfabéticos, para identificar el origen de los datos, que unicamente figuran en las Partes III y IV son los siguientes:

Nada – Captura nominal informada por un centro nacional mediante publicación o correspondencia oficial.

A – Capturas (o desembarques) declarados oficialmente, divididos por pesquerías (artes) y/o por zonas por el SCRS, un grupo de trabajo o la Secretaría.

E – Estimación efectuada por el SCRS o por uno de sus grupos de trabajo. Incluye las estimaciones de científicos de diversos países, o de la Secretaría, examinados y aprobados por el SCRS.

F – Datos tomados del Anuario Estadístico de Pesca, de FAO.

G – Estimación efectuada por la Secretaría a partir de la mejor información disponible.

L – Datos de desembarques nominales transmitidos oficialmente por un centro nacional, y que podrían no coincidir con el volumen, fecha y/o lugar de la captura.

N – Estimación efectuada por un científico en desacuerdo con las estadísticas oficiales, o en ausencia de éstas.

Notas al pié

Cualquier anomalía registrada tiene una nota al pié. Por ejemplo, en el caso de dos especies informadas conjuntamente, y cuya separación no ha sido posible, la captura combinada se declara bajo la denominación de la especie que suponemos ha predominado en el conjunto, con una nota explicativa. Estos datos deberán utilizarse con prudencia, dado que razones de índole práctica nos han impedido incluir notas al pié en todas las secciones. Las notas más completas aparecen en las Partes III y IV, y deberán consultarse para una mejor utilización de los datos de las Partes I y II.

Zonas geográficas

Las zonas geográficas utilizadas en las Partes III y IV se describen detalladamente en la pág. xii. En la Parte II se utilizan combinaciones de estas zonas:

Rabil y listado – Este u Oeste de los 30° W (mapa pág. xii)

Atún blanco, patudo, pez espada y agujas blanca y azul – Norte o Sur de los 5° N (siempre al Este de los 6° W incluído en el Sur) o Mediterráneo (mapa pág. xii).

Atún rojo – Este u Oeste, o Mediterráneo (mapa pág. xii)

Todas las demás especies – Atlántico y Mediterráneo combinados

Abreviaciones y códigos

Las abreviaciones y códigos utilizados en este Boletín se encuentran indicados en las págs. x-xiii.
